... Art, Unit: 2133

**Response to Amendment** 

1. This office action is in response to Applicants' Amendment of <u>16 October 2003</u>.

1.1 Claims 1-18 remain pending.

1.2 The art rejections of record are maintained in response to Applicants' amendment of  $\underline{16}$ 

October 2003.

**Response to Arguments** 

2. Applicants' arguments of  $\underline{16 \ October \ 2003}$  are persuasive only to the extent that the

memory means for storing a predetermined number and the retransmission means based on

number of times of a frame re-transmission request is received are not specifically described in

detail by GONNO. Said memory and retransmission means are clarified as follows.

Examiner notes that those of ordinary skill in ARQ design will recognize that an abort

feature is required for terminating retransmissions. Said abort feature is based on a preset

maximum number of times for retransmission requests because it is known that at times the

transfer medium is so noisy that data transmission must stop, and alternative corrective action

must be taken. Therefore, the criterion of basing frame re-transmissions on a predetermined

number stored in memory and keeping track of a cumulative number of times frames are

received in error, as claimed, is a design requirement for ARQ system design.

Examiner further notes that the prior art does not have to explicitly disclose what is well

known, but rather what is essential for enablement. Therefore, Examiner maintains it is not

required that Gonno teach textually what Applicants believe as not being taught or unclear in

paras. 2-3 of Applicants' response of page 2. What is required is equivalent functionality, and

Examiner maintains that such is provided by Gonno.

<u>REMARKS</u>

2.1 In response to claims 2 and 11, Applicants allege, on page 3, that such claims were

Application/Control Number: 09/898,347

... Art Unit: 2133

rejected as 'lacking novelty under PCT article 33(2).' A review of the last office action could not confirm such allegation.

## Claim Rejections - 35 USC ' 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3.1 Claims 1-18 are rejected under 35 U.S.C. 102 (b) as being anticipated by GONNO (EP Patent No. 000876023; 4 NOV. 1998).

As per Claims 1 and 10, Gonno discloses an equivalent means for providing frame retransmission in a broadcast communication system, comprising: a receiver (col. 4 line 9 and col. 5 lines 9-10) for receiving a message indicative of a frame received in error by a wireless communication device, said message including an identification of said frame; a memory (col. 4 line 27; (e.g., if an error is detected at the receiver, a NAK or repeat request is issued therefrom to the transmitter so that the frame marked as errored is to be retransmitted, said receiver/transmitter having storage means to hold/process such request.) for storing a predetermined number for determining when to re-transmit said frame; and a processor (col. 4 line 11) for determining a cumulative number of times that said frame was received in error and for ordering a re-transmission of said frame if said cumulative number of times is greater than said predetermined number (e.g., if predetermined number is zero, there is no frame retransmission, otherwise, the frame is retransmitted).

As per Claims 2 and 11, Gonno discloses an equivalent means wherein: said message further comprises a wireless communication device identification (col. 4 line 9 and col. 5 lines 9-10 or means to identify messages emanating from one or plural receivers); said memory

Application/Control Number: 09/898,347

. ... Art. Unit: 2133

(col. 4 line 27) is further for storing said wireless communication device identification; said processor is further for determining a cumulative number of times that said frame was received in error, said cumulative number increased each time that said frame is identified by subsequent messages from other wireless communication devices.

As per Claims 3 and 13, Gonno discloses an equivalent means wherein said message comprises a negative acknowledgement message (NAK) (col. 4 line 35 and col. 5 lines 15-17, col. 6 line 52).

As per Claim 4, Gonno discloses an equivalent means wherein said identification comprises a frame number (col. 4 line 9 and col. 5 lines 9-10).

As per Claim 5, Gonno discloses, in col. 4 line 11 and col. 12 line 52, an equivalent means wherein said predetermined number comprises a fixed number.

As per Claim 6, Gonno discloses, in col. 4 line 11, an equivalent means wherein, said predetermined number comprises a variable number.

As per Claims 7, 12 and 14, Gonno discloses, in col. 11 line 1, an equivalent means wherein said predetermined number varies in accordance with a latency associated with transmitting new data frames to said wireless communication device.

As per Claims 8, 15, 16 and 18, Gonno discloses, in col. 11 lines 1 and 11, an equivalent means further comprising a transmit buffer, wherein said latency is determined by counting the number of data frames waiting to be transmitted in said transmit buffer.

As per Claims 9 and 17, Gonno discloses, in col. 11 line 25 et seq., an equivalent means wherein said predetermined number varies in accordance with the number of wireless communication devices currently receiving a broadcast transmission.

3.2 To anticipate under section 102, a prior art reference must disclose all the elements of the claimed invention or their equivalents functioning in essentially the same way. The inquiry as to whether a

Application/Control Number: 09/898,347

. Art Unit: 2133

Page 4 of 4

subject matter is described by the reference. As set forth by the court in Kalman v. Kimberly-Clark Corp.

reference anticipates a claim must focus on what subject matter is encompassed by the claim and what

713 F.2d 760, 218 USPQ 781, 789 (Fed. Cir. 1983), cert. denied, 465 U.S. 1026 (1984) it is only

necessary for the claims to "read on' something disclosed in the reference, i.e., all limitations in the claim

are found in the reference, or 'fully met' by it." The Examiner respectfully submits that all the limitations

of Claims 1-18, or their equivalents functioning in essentially the same way, are found in the Gonno

reference.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

**4.1** Any response to this action should be mailed to:

Commissioner of Patents and Trademarks, Washington, D.C. 20231

or faxed to:

(703) 872-9306 for formal communications.

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington,

VA, Fourth Floor (Receptionist).

Any inquiry concerning this communication or earlier communications from the examiner should

be directed to Guy J. Lamarre, P.E., whose telephone number is (703) 305-0755. The examiner can

normally be reached on Monday to Friday from 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert

De Cady, can be reached on (703) 305-9595.

Any inquiry of a general nature or relating to the status of this application or proceeding should

be directed to the Group receptionist whose telephone number is (703) 305-3900.
